

Body text before the algorithm, at the full measure.

Algorithm 1: A bounded merge

Input : A sequence $a_1, \dots, a_n$ and a bound k

Output: The value best

```
1 best  $\leftarrow -\infty$ ;  
2 for  $i \leftarrow 1$  to  $n$  do  
3   if  $a_i > k$  then  
4     best  $\leftarrow$  Merge(best,  $a_i$ );           // keep the larger  
5   else  
6     while  $a_i < 0$  do  
7        $a_i \leftarrow a_i + k$ ;  
8 return best;
```
