

Body text before the algorithm, at the full measure.

Input: $n \geq 0$ and a base x

Output: $y = x^n$

```
1:  $y \leftarrow 1$ 
2: if  $n > 0$  then
3:    $y \leftarrow x$  {the base case}
4: else if  $n < 0$  then
5:    $y \leftarrow 1/x$ 
6: else
7:    $y \leftarrow 0$ 
8: end if
9: for  $i = 1$  to  $n$  do
10:  while  $i > 0$  do
11:     $y \leftarrow y \times x$ 
12:  end while
13: end for
14: for all  $j \in S$  do
15:   $y \leftarrow y + j$ 
16: end for
17: repeat
18:   $y \leftarrow y/2$ 
19: until  $y < 1$ 
20: loop
21:   $y \leftarrow y + 1$ 
22: end loop
23: return  $y$ 
```
